

Appendix IX. River / stock specific information used in the catch advice process for 2016 advice.

Details of page structure:

RIVER NAME

District: River district

IFI Code No: River reference number defined by Inland Fisheries Ireland

OS code ref: Ordnance Survey river code

EPA Hydrometric Area: Environmental Protection Agency hydrometric area reference

EPA Code ref: Environmental Protection Agency river reference number

Sea point: Latitude and longitude in degrees, minutes, seconds and decimal seconds (DD°MM'SS.ss) of river mouth

HABITAT:

Area:

Catchment Area km²: Area of river catchment in km²

Fluvial Habitat Area m²: River surface area in m²

Accessible Habitat area m²: River surface area accessible to salmon in m²

District	District of river detailed	
River / stock	River name and stock (1SW/ MSW) detailed. Indication of instances where 1SW and MSW are assessed separately and where advice is given jointly.	
Rod catch / Counter	Rod catch or counter data depending upon assessment. Where counter data are used the proportion of the rod harvest caught below the counter and incorporated into the analysis is indicated as "Proportion caught below counter"	
Rod harvest / Counter: years 1 - 5	Most recent 5 years rod catch (harvest) data or counter data if counter used for the analysis	
Rod catch & release / Rod harvest: years 1 - 5	Most recent 5 years rod catch and release data or rod catch(harvest) data if counter is used for the analysis	
Exploitation rate: Most likely	Most likely value of Exploitation rate used in Monte Carlo simulation – where rod catch is used for assessment	
Exploitation rate: Minimum	Minimum value of Exploitation rate used in Monte Carlo simulation – where rod catch is used for assessment	
Exploitation rate: Maximum	Maximum value of Exploitation rate used in Monte Carlo simulation – where rod catch is used for assessment	
Draft catch: years 1 - 5	Most recent 5 years draft net catch	
"COUNTER", "Mean C>10", or "Mean C<=10 Raised by 0.33"	COUNTER	Forecast based on counter data
	Mean C>10	Forecast based on rod catch data where average yearly catch is greater than 10 fish per year
	Mean C<=10 Raised by 0.33	Forecast based on rod catch data where average yearly catch is less than 10 fish per year. Assessment is therefore based on estimated returns of 1/3 CL.
75% Predicted Returns	Predicted 75 th percentile of returning salmon	
Conservation Limit (Median)	Median value of Monte Carlo Conservation Limit	
Catch option at 75% Probability of attaining CL	Surplus (or deficit where value is negative) at the 75 th percentile of predicted returning salmon above (or below) the Conservation Limit.	
Proportion of CL attained	The proportion of the CL achieved by the 75 th percentile of predicted returning salmon (values of less than 1 indicate a deficit and above 1 indicate a surplus)	

CASTLETOWN

District: Dundalk

Fisheries Board Code No: 03

OS Code ref: 92
